CLEVELAND CLAY LEAGUE

INTRODUCTORY

"Think what beauty, character, and value you can achieve with Brick and Tile construction — and how little it costs to get it in the modern Brick home!"

This suggestion, embodied in more formal terms in the program of the contest, defines the intent of the Clay League Architectural Competition.

Believing that heretofore comparatively few modern houses of this size had received the deserved attention of trained designers, it was our desire that the results of the Competition should stimulate in prospective owners an interest in better design.

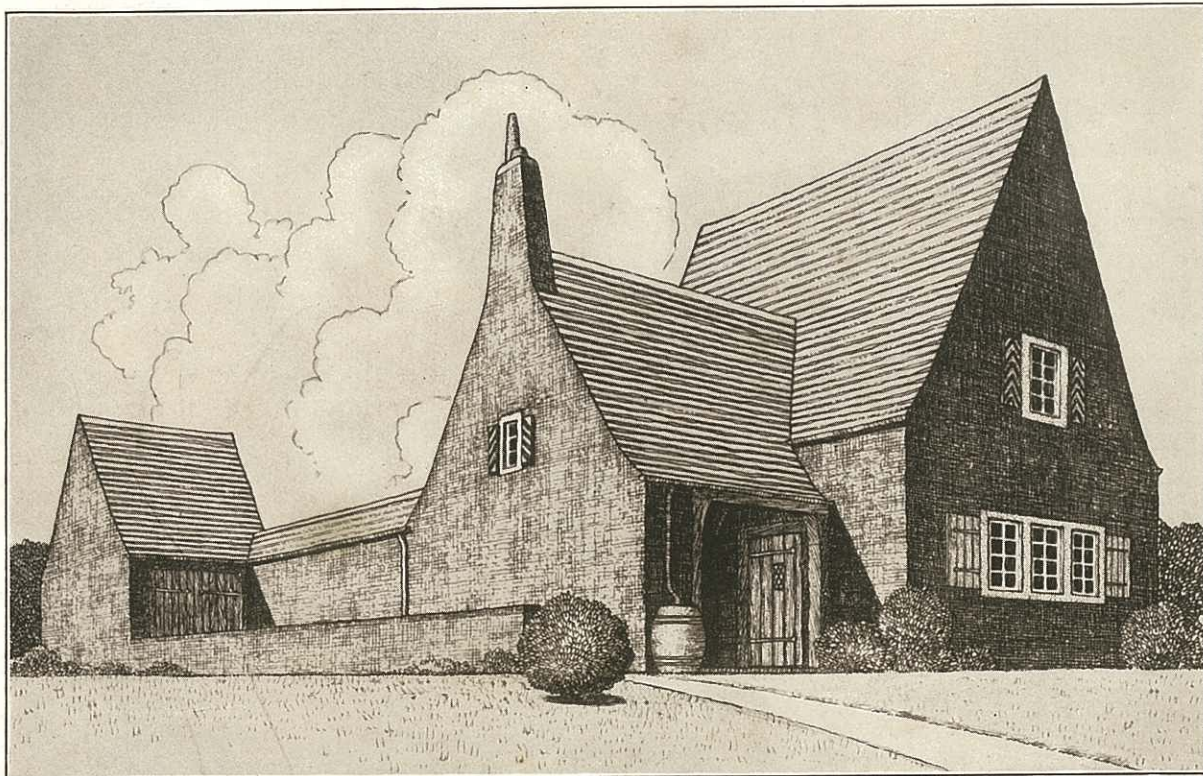

As to the cost estimates for the plans submitted, the conditions of the contest, which were prepared under the supervision of Philip L. Small, Secretary of the Cleveland Chapter of the American Institute of Architects, required that the house and garage cost not more than \$7,000, figured on their combined cubage at \$0.35 per cubic foot; porticos, pergolas, etc., at \$0.20 per cubic foot; nine-inch exterior walls to be used.

How competently the Architects of the community have brought their talent to bear in ingenious ways to gain highly artistic results in designing and planning fire-safe, permanently attractive homes of brick-and-tile is beautifully attested in the prize-winning exhibits which follow.

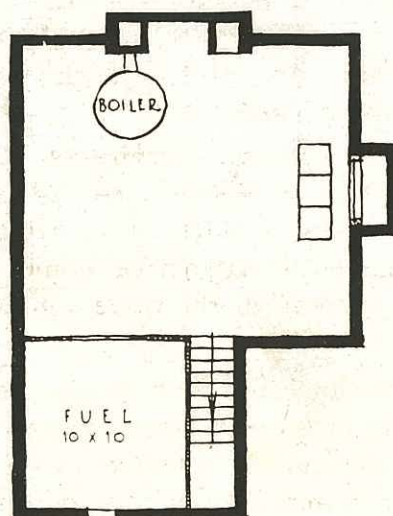

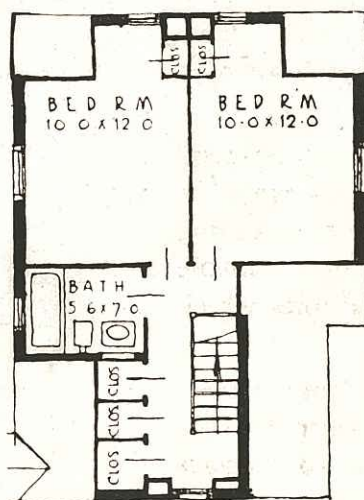

The purpose of this book is to present that record of achievement in a permanent, convenient form for the benefit of all who may be interested in the fine advantages which only Brick and Tile construction can assure.

CLEVELAND CLAY LEAGUE,
2124 Guarantee Title Bldg.,
Cleveland, Ohio

NOTE: Inquiries relative to the preparation of working plans may be made directly to the architects in whose designs you are interested, or, if you choose, will be forwarded to them from this office.

A Certificate of Enduring Quality

As a guarantee of the quality of masonry materials in exterior walls, and especially those portions of the walls which are not visible in a completed building, the Cleveland Clay League provides an official mark of certification.

When a building is eligible to be thus distinctively marked, it means that the walls, both those portions visible in finished houses and those which cannot be seen, are of fire-safe materials, have a high factor of safety, are built in accordance with the provisions of the building code, and are of permanent, Cleveland-made products. Such a building also commands the more favorable insurance rating.

In such homes as meet these requirements is placed an attractive hollow bronze "brick," shaped like a standard brick, bearing the seal of certification. Used as a corner stone, or set at any convenient place in the wall surface, it constitutes a permanent identification of superior masonry construction.

The League's certification is necessarily restricted to such houses and other buildings as are built of Cleveland-made brick or hollow tile, of which the quality and durability of the materials are actually known.

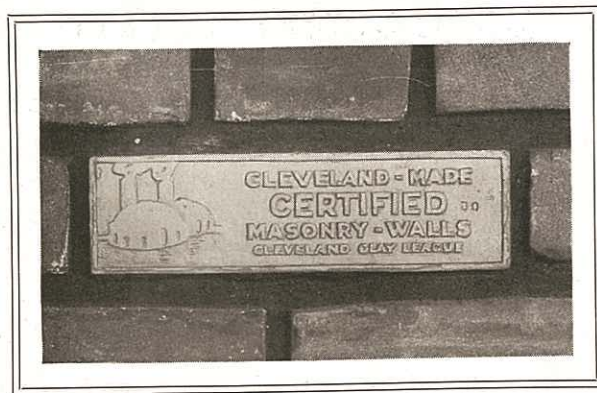

When a prospective home owner insists upon the high standard of construction, which alone may deserve the League certificate, he assures himself a dwelling of fine character and enduring quality, at no higher cost.
